

(CLAIM) - AI Contribution Record

A simple way to show what existed before AI was used and who stands behind the result.

CLAIM Framework

WHY THIS MATTERS

When AI is part of your work, the final output is only part of the story.

If a client, regulator, or colleague asks how something was created, you may need to show:

- what existed before AI was used
- what the AI actually did
- what you accepted, changed, or rejected

Most teams cannot easily answer these questions.

This record helps you capture that thinking at the point of use, not after the fact.

THE CLAIM FRAMEWORK

C	— Conception What existed before AI was used.
L	— Leverage What AI tool was used and what role it played.
A	— Assessment Why this output was trusted or chosen.
I	— Iteration What the human changed or added after AI was involved.
M	— Mandate Who approved the final output and is responsible for it.

RECORD TEMPLATE

Project		Date		Owner	
C	— Conception What existed before AI was used?				
L	— Leverage What role did AI play in this?				
A	— Assessment Why this output was trusted or chosen				
I	— Iteration What did you change, add, or correct?				
M	— Mandate Who approved and is accountable for this?				

If you find gaps while completing this, it usually means your AI use is ahead of your governance.

HOW TO USE THIS

Complete this at the end of any task where AI played a meaningful part.

A sentence per section is enough. You're creating a record, not a report.

Save it alongside the work it relates to, in a shared folder or project file.

This document is for internal record-keeping. It does not constitute legal advice or a formal compliance statement.
